How to clone and push into github

Command to Clone:

https://github.com/Likhith025/timetablegen.git

Do changes and run in your local host and then create a new branch and push it

Then you have to create a new branch or either you can change in your previous branch as well. You can't do anu changes in main branch because it is protected.

Command to create new branch:

git checkout -b branch_name

Normal Command

git add .

git commit -m "message"

git push origin branch_name

Once you clone, don't need to clone always instead use,

git pull origin branch_name
